16/3/26

Day - 1

Q1 - Num increase by 20% → 120.

Original Num ?

Sol.

20% = 0.2

120 = 1.2

so,

120 ÷ 1.2 = 100.

original num = 100.

Q2 - Laptop price increase from 50k to 60 k.

soln.

50k = 100%

add 10k = 20%

Percentage increase = 20%

Q3 - Score 72 out of 90 - Percentage score ?

Soln.

$= \frac{72}{90} \times 100.$

$= \frac{72}{90} = 0.8$, $0.8 \times 100 = 80.$

Percentage score = 80%.

Q4 - Polution increase from 50,000 to 60,000.

soln

= 50,000 = 100%.

= +10,000 = 20%.

Percentage increase = 20%

Q5 - Shirt cost ₹800 - After 25% discount,

25% = 0.25

0.25 × 800 = 200.

so,

800 − 200 = 600.

Final price = ₹ 600.

Verbal

1. Main Idea of passage.

Technology is transforming, so, business now depend based on data-driven decision making.

2. Tech mentioned:

1. AI - Artificial Intelligence
2. ML - Machine Learning
3. Automation

3. Why relay on data driven?

Companyes relay on data driven because to make best and smart decisions.

Grammer:

1. she doesn't understand the problem.

∴ don't → doesn't

2. He has completed the task

∴ Have → Has

3. They were going to the meeting

∴ was → were.

Problem solving:

arr = {1, 2, 3, 4, 6, 7, 8}; // 7 // n = (arr.length) + 1; coz 1 is missing

so, n = 8.

Hint = n * (n+1)/2.

$$Hint = \frac{8 \times 9}{2}$$

$$= \frac{72}{2} = 36,$$

Sum = 1 + 2 + 3 + 4 + 6 + 7 + 8 // 31

missing = hint - sum = soln.

36 - 31 = 5 //.

DBMS.

Primary key:

* Its a column in db. table.
* Uniquely Identifyes each record in table.

If duplicate appears

1062 - Error code appears.
